Summary

- The system needs to have a set of quick tools that users can make use of to make their time with the website faster and easier. Some of these tools include a flight calculator, time zone converter, and an airport finder.
- Flight events are nothing but the flight activities. Flight activities concern with arrivals, departures, stop overs, maintenance schedules etc.
- The user manual will take an in-depth look into the use of the system. The manual will include many pictures and simple how-to's that will allow users of all levels to easily access and make use of the system.
